

NGUYEN THANH KIEN

Software Engineer

Date of birth: 03/11/2002
Gender: Male
Phone number: +84 868409106
Email: kien.nt112002@gmail.com
Address: Hanoi, Vietnam
Github: github.com/ThanhKien00
LinkedIn: linkedin.com/in/thanh-kien/

DESCRIPTION

Software Engineer with more than 3 years of experience in Java and Spring backend development. Experienced in RESTful APIs, microservices, relational databases, caching and message queues. Delivered projects in e-commerce, payment, education and telecommunications. Looking for a role to build efficient solutions for complex systems.

CAREER GOALS

- Deliver high-quality software products that bring real value to users.
- Become a Solution Architect for complex software systems.
- Grow into a senior engineer with greater responsibility.

ACADEMIC LEVEL

2020 - 2024 **Hanoi University of Science and Technology**
Major: Electronic – Telecommunication Engineering
Specialization: Computer Engineering
CPA: 2.8/4.0

SKILLS

Technical skills	Languages: Strong in Java (Java 21/25), SQL and have knowledge Javascript/Typescript Backend Stack: Spring Boot 3/4, Spring Data JPA, Spring Security, Spring Cloud, Spring WebFlux, RESTful API Security: OAuth 2.0, OpenID Connect, Keycloak Storage & Caching: PostgreSQL, MySQL, Redis Distributed Systems: Apache Kafka (Message Queue, Event-driven Processing) Infrastructure: Docker, Kubernetes, Git, CI/CD (GitLab CI, Jenkins) Testing & Quality: JUnit, Mockito, SonarQube Architecture: Monolith, Microservices, Three-Layer Architecture Agentic Coding: Claude Code, Antigravity, GitHub Copilot
Soft skills	- Communicate and work effectively with team members, BA and QA. - Analyze requirements, break down and estimate tasks independently. - Energetic, proactive and professional attitude.
Office tools	- Word, Excel and PowerPoint.
Foreign Language	- TOEIC 800. - VSTEP B2 (Level 4/6). - Read, write and understand specialized documents.

ACTIVITIES

Oct 2022 – Jul 2024

Research Student – MPEC Laboratory, HUST

Member of MPEC Research Laboratory at HUST, led by Mr. Phạm Doãn Tĩnh. Main research area: software backend development.

Applied AI and Computer Vision techniques in laboratory projects.

WORK EXPERIENCE

Sep 2025 – Present

Software Engineer – Viettel Software

- Develop and maintain backend services with Java and Spring.
- Work through the full cycle: analysis, implementation, code review and deployment.
- Improve performance and integrate production services with the team.

Jul 2024 – Aug 2025

Software Engineer – SAMSUNG SDS

- Developed software features with Java and backend technologies.
- Worked with the team on analysis, implementation, testing and bug fixing.
- Followed the company coding standards and code review process.

Jul 2023 – Aug 2023

Summer Internship – Samsung R&D Center Vietnam

- Took part in company training and activities.
- Studied data structures, algorithms and problem solving in Java.
- Built an image editing application on Android.

KEY PROJECTS

TargetX – Digital Advertising Platform

Role	Backend Engineer
Customer	Viettel Telecom
Description	A demand-side platform (DSP) for enterprises to run SMS and push campaigns on the Viettel ecosystem. The Advertiser Portal manages brands, campaigns, ad content, segments and wallets. The Admin Portal approves advertisers, brands and campaigns, sets pricing policies and shows campaign reports.
Members	~10
Main responsibilities	- Built advertiser account management on the Admin Portal with a state machine: approval, rejection, suspension, reactivation and contracts. - Built campaign management on the Admin Portal: list, detail, approval, rejection and pause. - Built Advertiser Portal features: registration, login, brand, campaign and ad content management. - Built customer segment management and advertising pricing configuration. - Designed a two-layer cache with bitmaps to filter about 80 million subscribers by segment. - Integrated the SMS gateway, the consent service and the delivery flow with the Kafka outbox pattern. - Optimized SQL queries and indexes for listing and reporting APIs. - Designed database schemas and REST APIs. Wrote unit tests and fixed bugs.
Technologies	Spring Boot 3 (Java 21), Kafka, PostgreSQL, Redis, ClickHouse, MinIO, ReactJS

SME Portal – E-commerce Platform for Small and Medium Enterprises

Role	Backend Engineer
Customer	TPComs
Description	A multi-tenant SaaS platform where small and medium enterprises buy and manage the digital services of TPComs: cloud/hosting, domain, email and CRM. It covers the whole service lifecycle, from catalog, order, subscription and provisioning to contract, billing, payment, CRM and helpdesk. It runs on an Admin Portal, an SME Portal and a mobile application.
Members	~30

Main responsibilities	- Designed the microservices following Domain-Driven Design principles. - Designed the database schema for each service. - Built backend microservices with Spring Boot for the core business domains. - Built authentication, authorization and multi-tenant isolation with Keycloak and roles - permissions based access control. - Built the service catalog, order, subscription and provisioning flows. - Built billing and invoicing, and integrated payment gateway and e-invoice partners. - Designed REST APIs and Kafka event-driven flows between services. - Optimized SQL queries and indexes for data-heavy APIs. - Fixed bugs and maintained the services.
Technologies	Spring Boot, Keycloak, Kafka, Redis, PostgreSQL, Docker, Kubernetes, GitLab CI/CD

Multiple-choice Automatically Scoring and Create Test System

Role	Backend Developer
Customer	Hanoi University of Science and Technology (MPEC Laboratory)
Description	An automatic grading system that scores multiple-choice answer sheets with a trained image-processing (AI) model. It also manages students, teachers, subjects, exams, submissions and grading results.
Members	6
Main responsibilities	- Designed the database schema. - Build the management features for students, teachers, exams, subjects and results. - Designed and implemented the APIs for these features. - Integrated the automatic grading flow with the grading module. - Maintained the system, fixed bugs and wrote the system documentation.
Technologies	Spring Boot (Java 17), Python with YOLOv8, Redis, PostgreSQL, ReactJS, Android Platform
